

Software Engineer

Skillset

Languages

- Java
- JavaScript / TypeScript
- Python
- C#
- HTML / CSS

Backend & APIs

- Spring Boot
- Node.js / Express
- RESTful APIs
- WebSocket / TCP Sockets

Databases

- MySQL
- MongoDB
- SQL

Front-End

- React / React Native
- Electron

Cloud & Tools

- Google Cloud Run
- AWS (S3)
- Firebase
- Git

Security

- AES-256 encryption
- Secure session design

Core Strengths

- Problem solving
- Cross-team collaboration
- Learning agility

Education

Florida Atlantic University
B.A. in Computer Science, Minor in Cybersecurity
Expected May 2027

Boca Code

Software Developer Certificate

Relevant Experience

B.A. in Computer Science with a Minor in Cybersecurity (graduating May 2027). Hands-on experience building backend, API, and full-stack applications in Java/Spring Boot, Node.js/Express, and React, with team experience on projects of 3 to 10 developers and a focus on secure, reliable engineering.

Software Engineer

Best Candidate — Lake Worth, FL

2023 – 2025

- Contributed to development of a civic engagement platform (React.js, Node.js/Express, MongoDB), coding, testing, and debugging features that help users research candidates and issues.

Software Engineer Intern

Emergency Ventures — Remote

Sep 2022 – Jan 2023

- Collaborated with a 10-developer team to design, build, and deploy the Emergency Ventures app (React Native, ArcGIS, AWS S3) ahead of Hurricane Ian, coordinating closely with teammates to meet a hard deadline.

Coding Instructor

Code Superpowers — Remote

Jan 2022 – Jul 2022

- Taught programming fundamentals (Java, Python, Lua) to students, reviewing and debugging their code and translating technical concepts into clear, understandable explanations.

ADAS Calibration Technician

AUTOMEX USA — West Palm Beach, FL

2024 – Present

- Recalibrate ADAS modules and radar systems on vehicles on-site at dealerships, following precise technical procedures and diagnostic protocols to ensure systems meet manufacturer specifications.
- Designed and built the company website (www.Automexusa.com).

Projects

Secure Streaming Platform

<https://github.com/TheGoumble/secure-streaming>

Java · Spring Boot · WebSocket · AES-256 — FAU course project (3 members)

- Built a Java Spring Boot backend handling real-time data processing and secure session logic, integrating per-session AES-256 encryption and WebSocket-based communication between client and server.

Multiplayer Blackjack

<https://github.com/TheGoumble/COP4331-blackjack>

Java · Express.js · TCP Sockets · Google Cloud Run — FAU team project (4 members)

- Designed and implemented a hybrid architecture: an Express.js API deployed on Google Cloud Run for matchmaking/lobby logic and direct Java TCP socket connections for real-time gameplay, applying MVC and Observer design patterns.

PeerSphere

<https://github.com/TheGoumble/peersphere-electron>

<https://github.com/TheGoumble/peersphere-backend>

Java · MySQL — FAU team project (5 members)

- Built a layered Java/MySQL backend (models, DAOs, services) for a desktop app, writing and testing SQL queries to support study group and note-sharing features.

Meta Beanie

<https://github.com/TheGoumble/final-project-react>

<https://github.com/TheGoumble/final-project-api>

React · Express · Node.js · MongoDB

- Built a full-stack web application end-to-end: a React front-end connected to an Express/Node.js API backed by MongoDB, deployed on Firebase.
